Final Intergraded Project – Roadmap

A five responsive website of brand mash up for final intergraded project with validated html and working CSS for responsive website and some subtle CSS3 animation for the website.

Steps:

1. Create the git repo then git bash to where I want the folder to be
2. Create he basic structure for web development such as folder setup and CSS, html and JS files needed
3. Add in the images to be used in the website
4. Update the html files to set up the basic form of the website before adding in the content
5. Update the reset and main CSS file to set up the basic design of the website using html I have updated
6. Update the html files to added in the content to be adjust in CSS
7. Update the main CSS file to adjust the content I have added in using html
8. Check everything is functional
9. Update the CSS using media query to make the responsive website and adding in CSS animation
10. Check the website for any issues with responsive website
11. Update the Read Me file
12. Push everything to git repo
13. Submit the git repo link in submission on FOL
14.

Considerations:

- Make sure to validate the html to make sure everything is functional and outlined correctly
- Check if the CSS animation is to much or non-functional
- Check if the JS is connected to the html
- Check for anything is broking while checking the responsive website
- Make sure to commit everything and push everything to git repo
